

## OAKDALE'S WELLHEAD PROTECTION PLAN

The City of Oakdale has completed the development of our Wellhead Protection Plan. This plan is designed to protect the groundwater aquifers that supply water to the Oakdale municipal drinking water wells. The plan identifies potential sources of contamination that could pollute local groundwater wells and enter the community's water supply. The ultimate goal of this plan is help ensure that Oakdale continues to provide its residents with a safe and abundant supply of clean drinking water for generations to come.

Wells can become polluted when substances that are harmful to human health get into the groundwater. Water from these wells can become dangerous to drink when the level of pollution rises above health standards. Fortunately, the City of Oakdale's water supply currently meets (and exceeds) all State and Federal drinking water standards. The City regularly samples the water from their wells and provides an annual Water Quality Report at: <https://www.ci.oakdale.mn.us/DocumentCenter/View/2041/2018-Drinking-Water-Report> to residents.

The Wellhead Protection Plan can only be successful if residents play a role in helping to protect the aquifer. To help us implement our plan, you can do the following:

- Help identify land uses and potential sources of contamination on your property (wells, tanks, septic systems, hazardous wastes, etc.).
- Make sure any potential sources of contamination under your control meet local, state, and federal regulations.
- Seal any unused wells on your property, according to Minnesota Well Code. See the Minnesota Department of Health website <http://www.health.state.mn.us/divs/eh/wells/> for more information. Owners of active wells should refer to the Well Owner's Handbook at <http://www.health.state.mn.us/divs/eh/wells/construction/handbook.pdf> for proper construction, maintenance, and sampling information.
- Use hazardous products only as directed and dispose of them properly when no longer needed. Visit the Washington County website at <https://www.co.washington.mn.us/604/Environmental-Center> for information on handling and disposal of wastes, including information on the household hazardous waste collection facility, located in here in Oakdale.
- Practice proper turf management techniques and avoid over-fertilization of your lawns and gardens. Visit the University of Minnesota Extension website at <https://extension.umn.edu/lawn-care/fertilizing-lawns> for more information.
- Report spills (or illegal dumping) of hazardous wastes, fuels, or chemicals to law enforcement.
